

Supply Chain and E-Commerce Management

Optus Impex Pvt Ltd

About Optus Impex Pvt Ltd

- Optus Impex Pvt Ltd helps industries directly import from domestic and global suppliers.
- Key sourcing regions: India, China, Vietnam, Indonesia, Japan.
- Functions as a women's wear manufacturer and trading firm.
- Product range includes: accessories, trims, fabrics, and finished garments.
- Services are customized to client needs and quality standards.
- Focuses on the Indian market with a selective global presence.
- Specializes in fabric production, garment manufacturing, and end-to-end sourcing solutions.
- Has overseas offices in Guangzhou and Hangzhou (China).
- Backed by strong production and warehousing in India.

Market Analysis

Global Sourcing Landscape

- Global sourcing is growing as companies seek affordable, quality products.
- India, China, Vietnam, and Indonesia are leading manufacturing hubs due to low costs and strong infrastructure.
- More businesses are bypassing middlemen to work directly with suppliers, increasing efficiency and transparency.

Challenges & Shifts

- Trade volatility, geopolitical issues, and post-pandemic supply disruptions have pushed firms to rethink procurement.
- However, this has also led to growth in:
 - Digital sourcing platforms
 - Smarter logistics
 - Sustainability-focused sourcing

Optus Impex Pvt Ltd's Strategic Role

- Maintains strong ties with suppliers in China and India.
- Offers end-to-end solutions from fabric sourcing to garment production.
- Since 2019, it has also established itself as a notable manufacturer and exporter of women's fashion apparel.
- The company's 120% revenue and 161% profit growth in FY 2022-23 reflect its strong financial health and strategic direction.

STP (Segmentation, Targeting, Positioning)

Segmentation

- Industry: Trims and accessories like (laces, buttons, zippers, brooches, fabric patches etc), Finished fabrics and textiles
- Clients: Manufacturers, wholesalers, retailers, and exporters
- Geography: Domestic (India) and International markets (Asia-Pacific, Middle East, Europe)

Targeting

- Businesses requiring reliable sourcing partners for customized, high-quality products
- Companies seeking efficient, cost-effective procurement channels for bulk and specialty goods
- Organizations prioritize timely deliveries and consistent product standards

Positioning

- Optus Impex is positioned as a comprehensive sourcing and trading solutions provider, recognized for delivering quality products, strategic market insights, and seamless logistics support, thereby helping businesses strengthen their supply chains and enhance competitiveness in global markets.

Client base and strengths

Client base

- **International Clients:** Optus exports to global buyers including ASOS and its sub-brands like Sol Beach and Esmee.
- **Domestic Clients:** Optus serves Indian brands such as Shoppers Stop, Lifestyle, Madame, Rareism, Zink London, Label Life, FabAlley.
- **In-House Brand:** Optus owns its in-house brand, Tamiska, which is available at Shoppers Stop, Lifestyle, and its standalone store in Parel, Mumbai.

Strengths

- **Supplier Network:** Optus has a deep international sourcing network, especially in China.
- **Production and Operations:** The company maintains efficient manufacturing operations in India and a fully integrated production-to-shipment process.
- **Client Service and Delivery:** Optus excels in buyer relationship management and delivers high-quality.

Supply chain process overview

1. Buyer Engagement and Order Process

- Process starts with techpack from buyer, followed by sampling, costing, negotiation, and order confirmation.
- Price negotiations ensue, complete with reverse costing where necessary, to guarantee equal profitability.

2. Sourcing Operations

- Optus Impex deals with fabric and material buying directly from two prime hubs within China.
- Fabric is sourced from Guangzhou (small orders) and Keqiao (bulk custom orders) in China using non-nominated vendors.

3. Production and Shipment

- Once sourcing is completed, fabric preparation times differ by location.
- Garment production in India takes approximately 30 days after fabric receipt.
- Fabric is prepared in China, then sent to India for garmenting; final shipment is mostly via ocean FCL with 70–75 day lead time.

4. Challenges in Sourcing & SCM

- Issues like color mismatch, shipping delays, and surplus stock impact timelines and buyer satisfaction.
- Buyers are informed immediately about any timeline changes.

Supply chain process overview

5. Warehouse & Distribution

- Their warehouse is located in Vadpe Village, Bhiwandi (near Nashik Highway).
- Single 40,000 sq ft warehouse in Bhiwandi.
- Uses rack-based system for organized storage.
- Handles road distribution across regions.

6. Inventory Management

- Inventory management is done through ERP Tally Prime software by them.
- Tally Prime ERP tracks and manages inventory.
- Alerts for stock replenishment via warehouse head.
- Ensures real-time inventory visibility.

7. Buyer Types

- Caters to both regular and seasonal buyers, ensuring year-round production and demand flow.
- Buyers approve styles via presentation and quotations; orders are placed in monthly batches based on need.

8. Journey of One Style

- The process of executing a garment style begins when the order is received.
- On acceptance, the mail is passed on to the respective departments, and manufacturing starts.
- Starts with order and pricing, followed by lab dip approval, quality checks in manufacturing, and final shipment.

Information Flow

Participants in Supply Chain

Role	Participant	Location	Responsibility
Buyer/Client	Veda London & others	UK	Sends techpack and order details
Sales & Merch Team	Optus Impex (Mumbai)	India	Receives techpack, price negotiation, buyer coordination
China Sourcing Team	Guangzhou & Keqiao Offices	China	Sources fabric, does lab dips, testing, approval
Sampling Unit	Lower Parel	India	Develops and sends samples to buyers
Production Unit	Umiya & Rajlaxmi Factories	India	Manages stitching, finishing, QC
Warehouse Team	Bhiwandi	India	Stores raw/final goods, prepares for dispatch
Quality Control	Across stages	India & China	In-house & third-party tests (AZO, pH, FPT, GPT)
Logistics/Dispatch	India & global	India	Ships goods, tracks delivery

Sourcing

Guangzhou Sourcing:

- Fabrics are sourced from large market-style outlets.
- Order sizes have minimal levels. Minimal order size: 1 roll (80-100 meters).
- High stock availability: lace, trims, buttons, accessories, often available with swatch card collection to meet buyer requirements.
- Fabric preparation for shipment typically takes about one week.

Keqiao Sourcing:

- Key hub for bulk and price-competitive textiles
- Mostly operates on a make-to-order principle.
- Minimum bulk requirements: 5,000 meters for woven fabrics and 2,000 kilograms for knitted fabrics.
- Preparation for shipment may take 20 to 30 days, depending on customization needs for special quality fabric.

Local Teams in China:

- There are 30 local staff in Keqiao and 3-4 people in Guangzhou
- Provides constant sourcing assistance and in-country coordination.
- Handles audits and testing for materials sourced from China before final shipment.

Sourcing

Vendor Network in India

There are six major vendors with which they have tied up:

Quality Control *Process*

1. QUALITY CONTROL STAGES:

Quality checks are carried out at three key stages of production to ensure consistency and compliance:

Inline QC:

- Conducted during the initial phase of production.
- Ensures the right construction techniques, fabric alignment, and basic sewing standards.

Midline QC:

- Performed during ongoing production.
- Focuses on catching errors before mass production continues.
- Checks seam integrity, stitch density, and trim placement.

Final QC:

- Last inspection before packaging and shipment.
- Verifies overall garment quality, measurements, labeling, finishing, and packaging.

2. FPT, GPT & COMPULSORY CHEMICAL TESTS

Fabric Performance Test (FPT):

- Conducted before fabric cutting at the textile mill.
- Ensures fabric meets the buyer's standards before processing.
- Key parameters checked: Fibre content, weave, yarn count, fabric weight, and colour fastness
- Must pass FPT at an authorized lab to begin production

Garment Performance Test (GPT):

- Conducted before bulk garment production begins.
- Ensures finished garments meet buyer-specific safety and quality standards.
- Key parameters checked: Shrinkage, colour fastness (wash, rub, light), seam strength, tear strength, pH, and button pull
- GPT approval is mandatory for production clearance.

Compulsory Tests

- **AZO Test:** Ensures no harmful azo dyes are used
- **pH Test:** Confirms the garment is skin-safe and meets regulations
- Compulsory for all orders, regardless of buyer requirements
- Conducted in third-party labs (e.g., SGS, Intertek) with reports documented for compliance audits.

3. TESTING & DOCUMENTATION

Testing is typically conducted by third-party labs:

- Intertek (Kanjurmarg)
- SGS (Bangalore)

TRF: Test Requisition Form

- Official form used to request FPT/GPT.
- Includes: Sample details, Test types (physical, chemical, fastness), Buyer requirements
- Ensures clear communication between the manufacturer and the lab.

Buyer audits and final checks are often coordinated through China-based QA teams

Inventory Management & Warehouse Operations

Warehouse Location & Layout

- Located at Vadpe Village, Bhiwandi (near Nashik Highway).
- Total size: 40,000 sq ft
- 35,000 sq ft for fabric storage
- 5,000 sq ft for buyer-ready orders
- Also stores rejected buyer orders and excess stock

ERP Used : TallyPrime ERP

- Tracks fabric stock, production movement, and order status.
- Updates made when fabric arrives (via job card system).
- DPL (Digital Packing List) includes item codes, order numbers, quantities, and shipping info.

Logistics & Dispatch

- Sampling unit is separate (Lower Parel).
- For in-house brand Tamiska, they use Bluedart for last-mile delivery.
- LCL (Less than Container Load) is used to save shipping cost by sharing container space

Stock Reporting

- Every 15 days, a stock report is generated by scanning categories.
- Helps maintain control over fabric, trims, and finished goods

HANDLING EXCESS INVENTORY & REJECTED SHIPMENTS

Overproduction Handling

If fabric is produced in excess of order:

- First try: Convince buyer to take extra. PO may be raised.
- Second try: Ask mill to retain unused fabric.
- If both fail: Optus keeps it in warehouse.

Fabric Resale Attempts

- Extra fabric is shown to new buyers to initiate fresh orders.
- If no buyer agrees, fabric remains idle in stock

Rejected Orders

- Rejected or canceled shipments are stored in the warehouse.
- Optus states they avoid overproduction by ordering precisely what's needed.

Warehouse Buffer

Excess or rejected goods don't interfere with live orders because they're segregated

Logistics & Distribution

Transport Partners

Buyer / Brand	Transporter
Tamiska (in-house)	Bluedart
ASOS (export)	Scorpiomarine
Shoppers Stop (domestic)	Fine Line

Distribution Methods:

- Mostly done via road transport from the warehouse.
- Direct pickup from factory once packaging is completed (no middle warehousing delays)

Shipping Modes:

- FCL (Full Container Load) – used in 99% of cases (bulk orders).
- LCL (Less than Container Load) – for smaller orders, shared with other clients to save cost.
- Air shipments used for urgent/small orders (very costly; last resort)

Transit Times:

- Sea transit (China to India): 21 to 28 days.
- Guangzhou to destination port (total shipment time from readiness): 40-45 days.

Logistic Expenses:

Encompass FOB fees, insurance, fuel, and door delivery fees, typically computed as a component of the total freight charges

Shipment Terms:

Determined during negotiations and generally adhere to FOB (Free on Board), CIF (Cost, Insurance, Freight), or CIP (Carriage and Insurance Paid) terms, depending on buyer preferences

Floor Clearance & Broker Nomination:

- Buyer usually nominates the customs broker.
- If not, Optus nominates one on their behalf.
- Buyer selects the destination country and shipping terms.

Lead Time Overview

Optus Impex operates with two primary fabric sourcing hubs in China—Guangzhou and Keqiao—each with distinct timelines based on the type of fabric, sourcing process, and delivery method. Once fabric is sourced, garment production takes place in India. The cumulative lead time includes procurement, sampling, production, and logistics.

From Guangzhou (Ready-made fabric market):

- Fabric Preparation Time: ~1 week
- Sampling (Lab Dips/Strike-offs):
 - Lab dips for solid colors: 4–5 days
 - Strike-offs for prints: 8–10 days
 - Delivery to buyer for approval: 4–5 days
- Order Finalization & PO Formation: ~1 week
- Garment Production (India): ~30 days after fabric is in-house
- Shipping Time (Sea Freight): 21–28 days
- Total Lead Time (Order to Shipment): 70–75 days

From Keqiao (Make-to-order/bulk fabric market):

- Fabric Preparation Time: 20–30 days, depending on fabric complexity
 - Minimum Order Quantity: 5000 meters (woven), 2000 kg (knits)
- Sampling & Approval Process:
 - Lab dips: 10–15 days
 - Price Negotiation: ~7 days
- Garment Production (India):
 - Dyeing & finishing: 10–15 days
 - Digital/Screen printing: 10–15 days
 - Complex styles (e.g., trousers): 20–25 days
- Shipping Time (Sea Freight): 21–28 days
- Total Lead Time (Keqiao to Buyer): 70–90 days

Key Lead Time Metrics

Process	Guangzhou	Keqiao
Fabric Ready	~1 week	20-30 days
Sample Approval + Lab Dips	4-10 days	10-15 days
Production (after fabric received)	~30 days	~30 days
Shipping (Sea)	21-28 days	21-28 days
Total Lead Time	70-75 days	70-90 days

Repeat Orders:

- Time Saved: Up to 20 days as sampling and approval steps are skipped
- Fabric already approved or in-stock at mills

Logistics & Shipping Considerations:

- Shipping Mode: Primarily LCL (Less than Container Load) to reduce freight costs
- Air Freight (for urgent or delayed orders): Used sparingly due to high cost
- Custom Clearance Delays: Can occur if documentation is incomplete (e.g., IC, packing list, PO, declaration, airway bill copy)

Challenges

Like any complex supply chain, Optus faces operational and market-based risks. However, it has implemented several proactive strategies to minimize disruption and maintain client satisfaction.

Color Mismatches:

During bulk dyeing, mismatches can occur between approved lab dips and final fabric. If the buyer rejects the result, the entire production may be discarded and restarted.

Shipping Delays:

When containers aren't filled or mills delay dispatch, lead times increase. This impacts production schedules and can cause order backlogs.

Deadstock Management:

If fabric is overproduced or rejected, buyers may decline the surplus. In such cases, Optus either negotiates with mills or markets it to other buyers. If both fail, the excess remains in the warehouse.

Customs Delays:

Export shipments may be held up due to incomplete documentation, including POs, import certificates, declarations, and airway bills.

Buffer Inventory:

Maintains 2–3% safety stock for fabric and 1–2% for garments to absorb fluctuations or defects.

Order Clubbing:

Combines multiple orders to fill containers efficiently and reduce delays in Less than Container Load (LCL) shipments.

Clear Buyer Communication:

Buyers are informed immediately about delays. Revised ETAs typically add 10–15 days to original schedules.

Air Freight & Discounts:

Air cargo is used only for urgent or critical shipments. In case of delays, discounts are sometimes offered to retain buyer trust.

Flexible Sourcing:

Sourcing from multiple vendors across hubs like Guangzhou and Keqiao ensures agility and avoids bottlenecks.

Risk Mitigation *Measures*

Observations & *Suggestions*

Optus Impex Pvt. Ltd. has built a comprehensive and adaptive supply chain model that effectively links international sourcing with domestic production. The use of ERP systems, in-house manufacturing, and third-party testing ensures traceability, quality, and compliance at multiple levels.

However, certain areas show dependency on manual coordination and reactive strategies, especially under disruptions. The company's strengths in flexibility and vendor relationships position it well to evolve into a more tech-enabled and predictive operation.

Key Observations

- Seamless integration of China sourcing with India-based production and logistics.
- Strong use of job workers and scalable infrastructure in Mumbai and Bhiwandi.
- Consistent order volumes from trusted domestic and export clients.
- ERP usage (TallyPrime) ensures centralized inventory and process tracking.
- Reliance on mail communication for sample/lab dip approvals can delay decisions.

Adopt Predictive Analytics

Use AI/ML tools to forecast order quantities, anticipate lead time variances, and manage buffer inventory more scientifically.

Upgrade to Digital QC Tools

Integrate real-time quality control tools (e.g., AI-enabled defect detection during stitching or finishing) for faster feedback.

Strengthen Buyer Collaboration Portals

Develop a live dashboard for buyers to track sampling, approvals, production progress, and logistics in real-time—minimising dependency on email threads.

Digitize Export Documentation

Automate customs paperwork generation and tracking to reduce clearance delays.

Implement Sustainability Audits

Introduce fabric traceability, water usage, and carbon footprint tracking in the supply chain to prepare for ESG (Environmental, Social, Governance) compliance demands.

Thank You
